time to save lives

## Spider S3

The lightweight, easy to use Spider S3 is designed for use in light commercial aircraft and private general aviation aircraft. It has an integrated keypad and sits on the dashboard of your aircraft. The Spider S3 is easily mounted with an adhesive bracket and is powered by the cigarette lighter plug of the aircraft's 12 volt or 24 volt electrical system. There is no external antenna, no batteries to replace and no installation costs; it's portable from aircraft to aircraft.

The Spider S3 is perfect for all commercial operators, flying schools and aircraft owners or renters. The unit starts sending your location as soon as it has power. The Spider S3 is a simple plug-and-play GPS tracker that turns ON automatically during takeoff and tracks you in real time. GPS location information and flight data is sent every two minutes via the Iridium Satellite Network back to the spidertracks network. If needed, an SOS alert message is sent automatically by the spidertracks network.

USD \$995.00

As your Spidertracks representative we can provide you with further information on the spidertracks systems and the services available to you. Please contact us to arrange for a **demonstration** in your aircraft. You may also be eligible for a **free two week trial** of a Spider S3.

Please [Contact Us](#) directly to place your order and for payment and shipping options.

## Emergency SOS centre 24/7

Should the worst happen and one of your aircraft is involved in an accident, the Spider stops transmitting to the website and the system immediately sends SOS messages by text and email to your support people.

Should they be out of cell phone contact, have spidertracks support centre ensure the SOS is responded to for only \$5 per event. Spidertracks Call Centre will make contact with your support people and ensure the SOS is resolved 24/7.

## Geofence

Reduce data plan costs with up to five Geofenced areas.

For \$10 per month per Geofence, you can specify areas where the position reporting rate will automatically change. The GPS inside the Spider can determine, based on location and altitude, where to report at a higher, lower, or zero reporting rate. Specific events can also be programmed to be sent inside the area as well.

## Notifications

Always know what your aircraft are doing with Notifications.

Send customized SMS and email messages to anyone you choose with spidertracks Notifications. Automatically send take off and landing SMS and email messages to selected people, up to four customized Mark messages or Spiderwatch messages. At \$0.20 per SMS and no charge for email, Notifications are ideal for family members to know you are going flying, and let operations managers plan fleet movements more efficiently.
